

## Joget Workflow is an open source platform to easily build enterprise web apps.

**Build full-fledged apps e.g. CRM, HR, Healthcare, etc.**

**Apps are mobile optimized and cloud ready**

**Add workflow to automate processes**

**Extend via plugins**

**Download ready made apps in the Joget Marketplace**

More than just a workflow or BPM platform, Joget offers full-fledged agile application development capabilities (consisting of processes, forms, lists, CRUD and UI), not just back-end EAI/orchestration/integration or the task-based interface for traditional workflow/BPM products. So for example, build a sales force automation app instead of just a sales quotation approval process.

With a comprehensive plug-in architecture, developers are also able to easily extend the platform and integrate Joget Workflow with other systems whenever required.
